

# AFE characterization

Antoine

CBPM meeting: October 6, 2023

## 4 AFE cards:

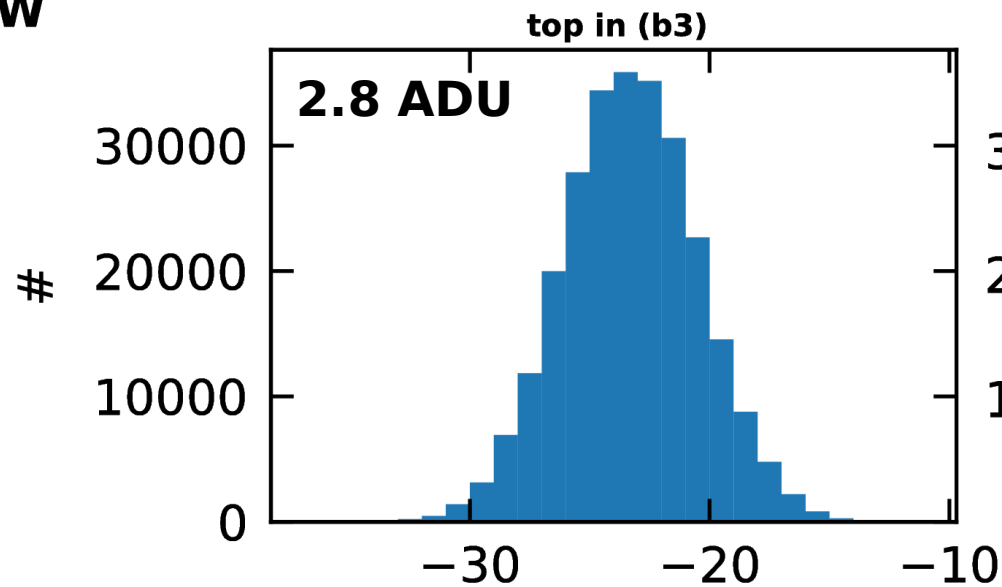

- x without the fixed gain amplifier but,
- x with the diode protection board instead

Difference between the cards is the value of R134 (values to be checked):

- x bottom in: 0 ohm
- x bottom out: 33
- x top in: 10 ohm
- x top out: 25 ohm

# RMS noise

12W

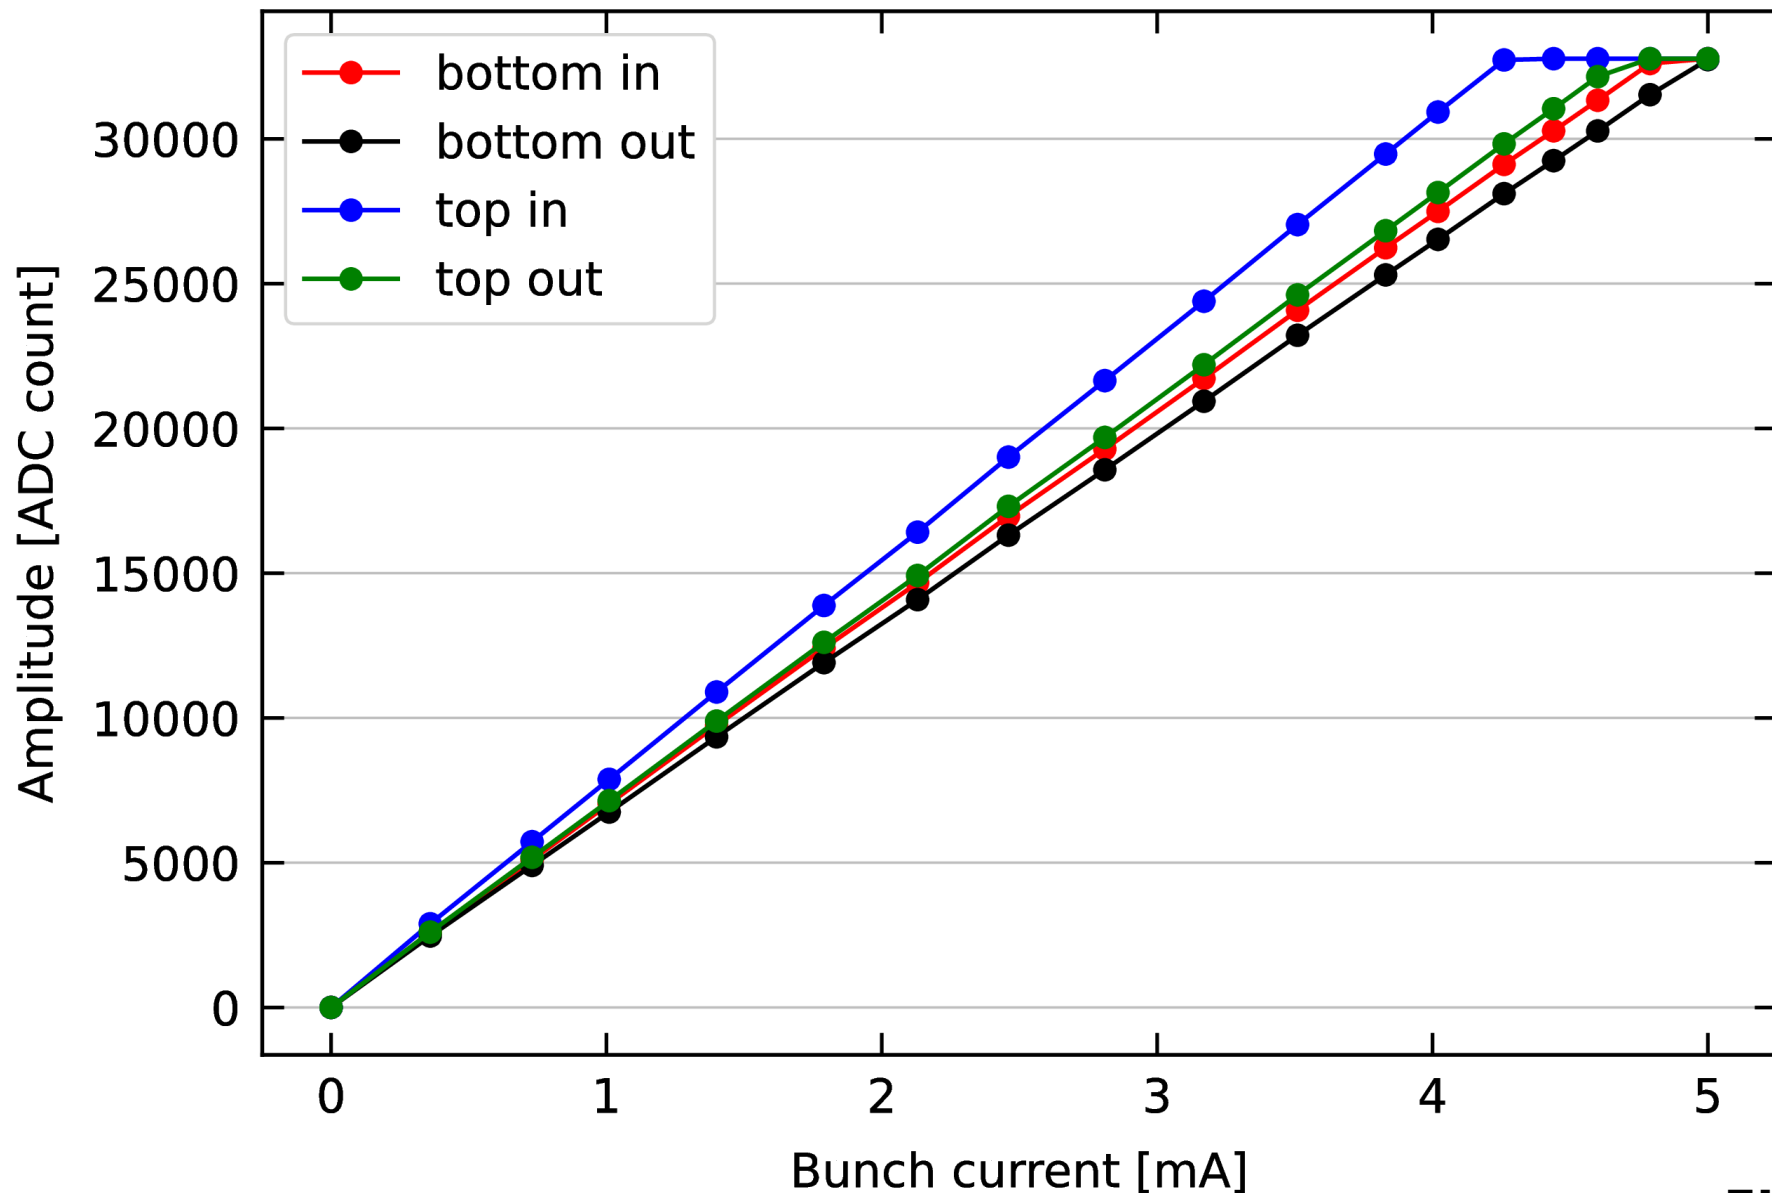

Raw ADC values

Raw ADC values

# Amplitude vs bunch current

**12W** (ctactf133), peak-aligned at each current step – Tuesday **10/03**

**FIXED GAIN**

# Amplitude vs bunch current

After scaling for the gain difference (from R134) at lowest current

**FIXED GAIN**

# Amplitude vs bunch current

After scaling for the gain difference (from R134): zooming on [0, 3] mA

**FIXED GAIN**

# Amplitude vs bunch current

After scaling for the gain difference (from R134): zooming on [3, 5] mA

**FIXED GAIN**

# Waveform: 2.1 to 5 mA

# Waveform: 2.1 to 5 mA

# Waveform: 2.1 to 5 mA

# Waveform: 2.1 to 5 mA
